## EARTH TAGS

CMP slip on earth tags, installed between the cable gland and equipment, provide an earth bond connection as specified in BS6121:Part 5:1993 and comply with category $B$ rating specified in IEC 62444. CMP earth tags have been independently short circuit tested to verify their suitability under specified service conditions. A copy of the test report is available upon request and is an important factor when selecting earth tags from any manufacturer, as without this the safety of installations may be compromised.

Stainless steel, aluminium and nickel plated brass earth tags are also available. Please refer to ordering reference numbers (page 163), e.g 20ET4 for M20 stainless steel earth tag, 050NPTET4 for $1 / 2$ " NPT stainless steel earth tag.

## CABLE GLAND WARMER

Where it is not possible to erect a shelter for the application of epoxy compound or RapidEx liquid resin it is recommended that a CMP cable gland warmer be used for localised heating of barrier type cable glands.

CMP cable gland warmers may be used when installers do not have access to hot air guns. Similarly when electrical power is not available on site enabling electric heating blankets to be used, or the site conditions do not permit their use.

CMP cable gland warmers comprise a self-contained heat pack which has been designed to completely enclose any of the CMP RapidEx barrier cable gland range. The cable gland warmer operates using crystallisation of supersaturated sodium acetate to raise the temperature of the cable gland up to $60^{\circ} \mathrm{C}\left(140^{\circ} \mathrm{F}\right)$ and is only suitable for use with RapidEx liquid resin.

As the cable gland warmer releases heat for a limited time, it is important that they are used in the most effective manner; this involves wrapping the cable gland warmer around the cable gland so that heat is transferred directly. This will ensure that the barrier tube, where the RapidEx liquid resin will be poured, is suitably prepared and ready for use.

For use in environments between $-10^{\circ} \mathrm{C}\left(14^{\circ} \mathrm{F}\right)$ to $+5^{\circ} \mathrm{C}$ ( $41^{\circ} \mathrm{F}$ )
