Patriot (SDSS Cable Cleat)

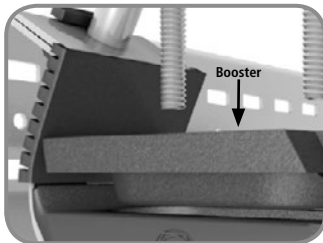

**Cleat Installation
Instructions**

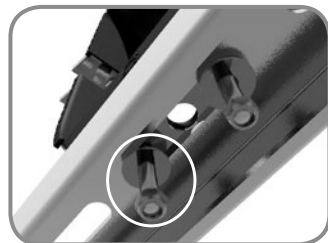

CMP Cleat Installation Instructions

1. Place the cable cleat in desired location on mounting surface and unhinge the cable cleat.

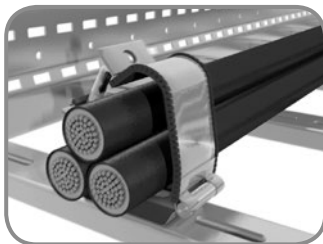

2. Insert base booster if required.

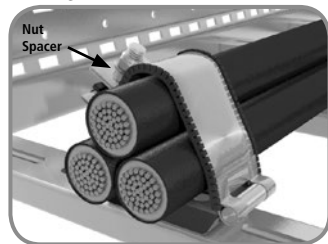

3. Secure cleat to the mounting surface using 1 or 2 X M10 bolts, adding a washing and nut on both sides.

4. Tighten down to specified torque rating of 8Nm.

5. Place the cable into the cleat and pull the hinged arm over the cables.

6. Using supplied mouthpiece fittings, tighten down to no more than 8Nm with 19mm nut spanner.

Note: Cleat marking can be found on hinged arm
